

# IPTV - Couldn't Download System Update- 9178

## Introduction

- Customers might see this when the box is taking an upgrade but fails due to not enough storage space available
- If customers see this, they likely have many apps downloaded and installed (above and beyond what are on the devices from the factory)

## Resolution Steps

1. Advise the customer to **delete a few apps** to allow enough space for the update to complete
2. **Reboot the IPTV box through Merlin**
  - If you are unable to reboot through Merlin, follow [power cycling](#) steps
3. Once the Box is back up, the customer can re-download the apps
4. This issue may happen again if another update is sent out; we are working on a permanent fix. Always send this issue as an escalation so that the proper parties can see it
  - Click **Create Work Order or Technical Case**, fill out the information as described below and click **Submit**

<b>Trouble Call or Tech Case</b>	IPTV Issue
<b>Service Category</b>	IPTV ONLY
<b>Problem Description</b>	Network Connection Issue -

<b>Select</b>	IPTV
<b>Add</b>	Click the box next to the affected box(es) <b>only Error Code(s)</b> , Contact Phone, Contact name and troubleshooting steps
